

# L085-DEVKIT

## Brief

L085 is 5.3-130mm focal length (25x) motorized zoom lens is designed for 1/2.7" image sensors, has zoom/focus/iris functions, designed for 5M sensors.

## Mechanics

|  |  |
|--|--|
| Flange back ( <b>FB</b> , see diagram below) | -0.325mm (in glass t=0.3 IRCF)   |
| Lens zoom structure                          | The stepper motor is directly connected to the screw   |
| Lens focusing structure                      | The stepper motor is directly connected to the screw   |
| Lens size                                    | <ul style="list-style-type: none"> <li>• Length: 92.49mm</li> <li>• Width: 50.1mm</li> <li>• Height: 43.8mm</li> <li>• Front end diameter: 44.6mm</li> </ul> |
| Weight                                       | 116g (+controller 7.8g)  |

In order to accommodate different image sensors, the focal distance is set back by flange back (FB) distance. The actual distance for a specific sensor has to be calculated and spacers used. If the image plane is not set correctly, focus irregularities in the projected picture are expected.
